Extracting Text

Load the PDF and call `ExtractText` with the operation and an options object. The result is returned as JSON:

```
new Pdf pdf;
success = pdf.LoadFile("report.pdf");
new JsonObject json;
new JsonObject jsonOut;
success = pdf.ExtractText("text",json,jsonOut);
println jsonOut.StringOf("text");
```

An empty options object extracts every page with the default clean-up. Set `pages` to limit the extraction.
